

IN THE CLAIMS

1. (Currently amended) A automated machine assembly comprising an automated machine and a door and door chassis combination enclosing the automated machine ~~for an automated machine, the door and door chassis combination~~ comprising first and second mobile panels and a door chassis delimiting an opening, the door chassis equipped with guide means for the movement of the first and second mobile panels, between a closed position in which a façade of the mobile panels at least partly closes the opening and an open position in which the mobile panels are located laterally with respect to the opening, wherein the combination further comprise:

a man-machine interface mounted to one of the first and second mobile panels, a façade of the man-machine interface accessible when the mobile panels are in the closed position, and

a means for displacing the mobile panels assuring that when the mobile panels are in the open position, the façade of the man-machine interface is positioned so that an operator in position in front of the opening in the door chassis can access the opening and the man-machine interface at the same time, wherein the man-machine interface includes one or more of machine instrumentation and control means for controlling of the automated machine,

wherein the displacement means comprises at least one support and guide rail for at least one roller device fitted on the first mobile panel hinged

to the second mobile panel, the second mobile panel hinged on the chassis, the first and second mobile panels being intended to fold in contact with each other, and when folded, the door chassis opening is accessible.

2. (currently amended) The ~~combination~~ assembly according to claim 1, wherein the door and door chassis combination further comprises ~~reception structure displacement means are composed of~~ means for sliding and pivoting the first and second mobile panels ~~mobile panel~~ thus ensuring that the ~~mobile panel~~ façade is facing the opening when the first and second mobile panels ~~mobile panel~~ ~~[[is]]~~ are in the open position.

3. canceled

4. (currently amended) The ~~combination~~ assembly according to claim 1, wherein the door and door chassis combination enables ~~reception structure displacement means enable~~ the façade of the man-machine interface to move into a plane forming an angle with the plane delimited by the opening equal to between 40° and 135°.

5. (currently amended) The ~~combination~~ assembly according to claim 1, wherein the door and door chassis combination enables ~~reception structure displacement means enable~~ the façade of the man-machine

interface to move into a plane approximately perpendicular to the plane delimited by the opening.

6-11. canceled

12. (currently amended) The ~~combination~~ assembly according to claim 1, wherein the support and guide rail is an upper rail arranged in ~~[[the]]~~ a top part of the door chassis and the door chassis further comprising a guide rail as ~~[[the]]~~ a lower rail arranged in ~~[[the]]~~ a lower part of the door chassis, one of the upper rail and lower rail supporting the at least one roller device with the other of the upper rail and lower rail ~~guide-rail~~ supporting a guide device fitted on the first mobile panel.

13. (currently amended) The ~~combination~~ assembly according to claim 1, wherein the ~~[[firs]]~~ first mobile panel further comprises a housing surrounded by side plates, a back plate and the façade, the housing receiving the man-machine interface.
